EDUCATION

University of California, San Diego

La Jolla, CA

Bachelor of Science, Data Science

09/2023 - 06/2027

- GPA: 3.97/4.0
- Instructional Assistant: Supported 1,000+ students in Principles of Data Science course by resolving 750+ tickets regarding pandas and statistical inference. Achieved a 100% recommendation rate across multiple course offerings.
- Research Assistant: Analyzed historical commodity pricing data with PCA and cointegration testing, uncovering long-term interdependencies that informed research on African market dynamics and policy implications.

PROFESSIONAL EXPERIENCE

Klaviyo

Software Engineering Intern

06/2026 – 08/2026

- Summer 2026 intern supporting the Data Infrastructure pillar on the Applied Custom Objects team. Contributing to the development of scalable object feed infrastructure for customer-defined data objects.

Oklahoma City Thunder

Data Science Intern

01/2026 – 05/2026

- Built a GRU-based sequence model with attention in TensorFlow on NBA pose tracking data to predict bad pass steal probability, improving postgame analysis quality by 15%. Stored insights in dynamic R Shiny dashboard.
- Engineered spatiotemporal features from raw player tracking data and addressed class imbalance with weighted loss, achieving a 25x improvement in PR-AUC and Log Loss over baseline.
- Deployed the model end-to-end on AWS SageMaker, and developed scalable S3 pipelines to enable real-time inference on live data in-game.

Verisk

Data Science Intern

06/2025 – 08/2025

- Built a multi-agent RAG workflow with LangChain to simulate legal processes for casualty claims, reducing research time by 40% and improving consistency in settlement evaluation. Deployed as chatbot to Hugging Face spaces.
- Developed an NLP evaluation pipeline (keyword overlap, semantic similarity) to evaluate agent responses, improving accuracy of legal document alignment scoring and reducing reliance on manual review.
- Implemented Monte Carlo simulations to model distributions of claim settlement outcomes, enhancing risk evaluation and leading to more precise premium-setting strategies.

PROJECTS

SMT Data Challenge (Finalist)

<https://pranavrajaram.com/smt-data-challenge.pdf>

- Developed a machine learning pipeline on MiLB tracking data to model baserunning with logistic regression and optimize cutoff play decisions with a Random Forest classifier, visualized through an interactive dashboard.

LA Hacks

<https://devpost.com/software/cadence-ch4rmf>

- Built a post-op companion for CHF patients on Expo, with an on-device OCR pipeline using Apple Vision and Gemma 4 to extract structured medication regimens from discharge paperwork, a Node.js/MongoDB backend, ElevenLabs voice cloning to deliver daily check-ins, and a React dashboard that flags clinical updates to caregivers.

Football Wordle Game

<https://drakemayedle.pranavrajaram.com/>

- Architected and deployed a full stack Wordle-style game using TypeScript (Next.js) and Python (FastAPI), featuring deterministic daily puzzles, stateless multiplayer session handling, and a read-only SQLite datastore.

TECHNICAL SKILLS

Programming Languages: Python, SQL, Java, JavaScript, TypeScript, R, Go

Frameworks & Libraries: PyTorch, TensorFlow, LangChain, Flask, Next.js, React, pandas, scikit-learn, Dask, Spark

Tools & Platforms: Git, Docker, Kubernetes, AWS, PostgreSQL, MongoDB, Snowflake, Databricks, Tableau
