Education

University of California, San Diego La Jolla, CA

Bachelor of Science, Data Science 09/2023 - 06/2027

- GPA: 3.97/4.0
- Instructional Assistant for Principles of Data Science Course (DSC 10), achieved 100% student recommendation rate.

Professional Experience

Shopify

Data Science Intern 09/2026 – 12/2026

- Building data models and analytics tools to support product insights on Checkout & Accounts team.

Klaviyo

Software Engineering Intern 06/2026 – 08/2026

- Built an async JSON:API REST service in FastAPI with full CRUD endpoints, gRPC backend integration, cursor pagination, Kubernetes deployment, and Sentry alerting. Reduced API response latency by 20% using Redis caching.
- Developed a full-stack framework with React, TypeScript, and Python that enabled customers to create, configure, and deploy custom object sorting algorithms, decreasing configuration time by 35%.
- Implemented a collaborative filtering recommender system using implicit to personalize custom object feed results based on user engagement signals, improving customer feed relevance by 5x.

Oklahoma City Thunder

Data Science Intern 01/2026 – 05/2026

- Built a GRU-based sequence model with attention in TensorFlow on NBA pose tracking data to predict bad pass steal probability, improving postgame analysis quality by 15%. Stored insights in dynamic R Shiny dashboard.
- Engineered spatiotemporal features from raw player tracking data in Polars and addressed class imbalance with weighted loss, achieving a 25x improvement in PR-AUC and Log Loss over baseline.
- Deployed the model end-to-end on AWS SageMaker, and developed scalable S3 pipelines to enable real-time inference on live data in-game.

Verisk

Data Science Intern 06/2025 – 08/2025

- Built a multi-agent RAG workflow with LangChain to simulate legal processes for casualty claims, reducing research time by 40% and improving consistency in settlement evaluation. Deployed as chatbot to Hugging Face spaces.
- Developed an NLP evaluation pipeline (keyword overlap, semantic similarity) to evaluate agent responses, improving accuracy of legal document alignment scoring and reducing reliance on manual review.

Projects

SMT Data Challenge (Finalist)

https://pranavrajaram.com/smt-data-challenge.pdf

- Developed a machine learning pipeline on MiLB tracking data to model baserunning with logistic regression and optimize cutoff play decisions with a Random Forest classifier, visualized through an interactive dashboard.

LA Hacks

https://devpost.com/software/cadence-ch4rmf

- Built a post-op companion for CHF patients on Expo, with an on-device OCR pipeline using Apple Vision for document scanning, a Node.js/MongoDB backend, ElevenLabs voice support, and a React dashboard for monitoring.

Football Wordle Game

https://drakemayedle.pranavrajaram.com/

- Architected and deployed a full stack Wordle-style game with 1,000+ daily users using TypeScript and Python (FastAPI), featuring deterministic daily puzzles, stateless multiplayer session handling, and a SQLite datastore.

Technical Skills

Programming Languages: Python, SQL, Java, JavaScript, TypeScript, R, Go

Frameworks & Libraries: PyTorch, TensorFlow, LangChain, Flask, Next.js, React, pandas, scikit-learn, Dask, Spark

Tools & Platforms: Git, Docker, Kubernetes, AWS, PostgreSQL, MongoDB, Snowflake, Databricks, Tableau
